EV EDISON · POWER EDISON

C3 Site Finder Dashboard User Guide

Every screen, field, number and control in the dashboard: what it shows, how it is calculated, and how to use it to choose medium and heavy-duty truck charging sites for the NJDEP C3 NOFA.

The dashboard with all 30,584 screened candidate sites loaded. The screenshots in this guide use a simple county-outline basemap. In the live app you see Google Maps (road or satellite) or the OpenStreetMap basemap behind the dots.

Version 1.1 · November 2026

1 · What the dashboard is for

The NJDEP **C3 Medium & Heavy-Duty EV Charging Infrastructure NOFA** funds truck charging sites near New Jersey's interstates. Proposals are due **December 23, 2026**, and each one is scored against the other proposals in the same **segment** (a group of counties).

The dashboard turns the screening workbook into a working tool:

- **30,584 candidate sites**: parcels within 5 miles of an eligible interchange that are vacant, commercial or industrial and at least 1 acre. Adjacent lots with the same owner are merged into one site.
- Every site gets a **score out of about 110**, calculated by the app with the same algorithm as the workbook. Scores match to ±0.05, and ranks are identical.
- All sites are shown on a map together with **EV Edison / Power Edison's own sites**: the Kearny Point hub, plus the Irvington, Edison and Paterson pipeline sites.
- For each site you get the reasons behind its score, its parcel and owner details, and the largest truck fleets nearby, so you can move straight to review and outreach.

> **Who the sites are for. Power Edison** builds trailer-mounted, utility-grade battery systems. These let a charging hub open before the utility has finished upgrading the grid. **EV Edison** is its charging-hub business; its flagship **Kearny Point** hub (opened 2025) has 30 × 180 kW ports and handles about 200 heavy-duty charging sessions a day in Phase I. NJDEP may fund only one of two strong proposals that are close together. That is why the dashboard flags candidates within 2 miles of a Power Edison site.

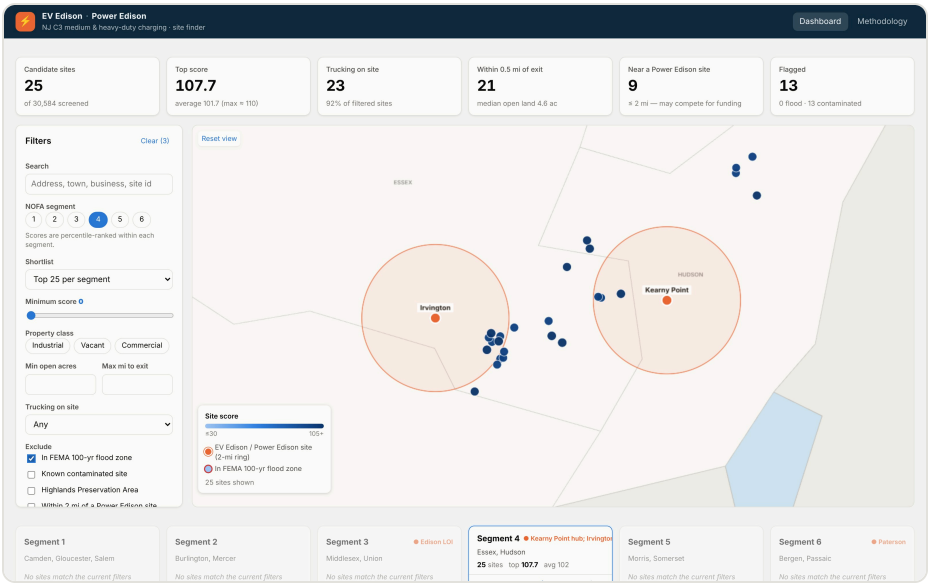

2 · Opening the dashboard

1. Start the API. In the `NJTruckCharging\NJTruckCharging` folder, run `dotnet run --launch-profile http`. The first time, it creates the database and loads the workbook, which takes about 20 seconds.
2. Start the web app. In `NJTruckCharging.Web`, run `npm install` (first time only) and then `npm start`.
3. Open **http://localhost:4200** in Chrome or Edge.

If a red banner says *"Cannot reach the API"*, the API from step 1 isn't running.

3 · Screen layout at a glance

The dashboard is one page, read from top to bottom. A single set of filters drives every part of it: the map, KPI cards, segment cards, charts, table and export all show the same filtered sites.

Example: Segment 4 only, top 25 per segment, flood-zone sites excluded, map zoomed to Essex/Hudson. The filter panel shows "Clear (3)", every number updates, and segment cards that don't match the filters are dimmed.

A **Header bar**: brand and page navigation (§4)

B **KPI cards**: six headline numbers (§5)

C **Filter panel**: left column (§6)

D **Map**: centre (§7)

E **Site detail panel**: right column, appears when you pick a site (§8)

F **Segment cards**: six cards under the map (§9)

G **Charts**: score distribution, class, interstate, utility, deadline (§10)

H **Ranked sites table**: bottom of the page, with CSV export (§11)

> **How updates work.** A change to any filter is applied about ¼ second after you stop typing or clicking. The map and KPIs reload, and the table goes back to page 1. While data is loading, a dark *"Loading sites…"* label appears at the top of the map. On narrow screens the panels stack vertically, and the colors follow your system's light or dark mode.

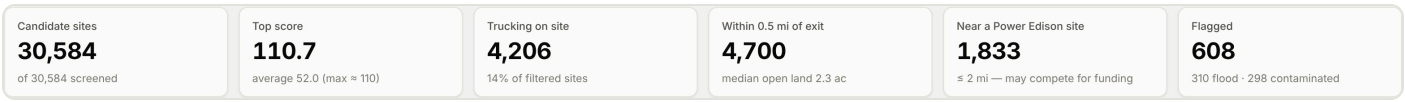

4 · Header bar

Element	What it is / what it does
⚡ **EV Edison · Power Edison**	Brand. The subtitle "NJ C3 medium & heavy-duty charging · site finder" names the program.
Dashboard	The main page (everything in §5–§11). It is highlighted when you are on it.
Methodology	Opens the reference page: about the companies, the Power Edison site list, the scoring rules and the data sources (§12).

5 · KPI cards

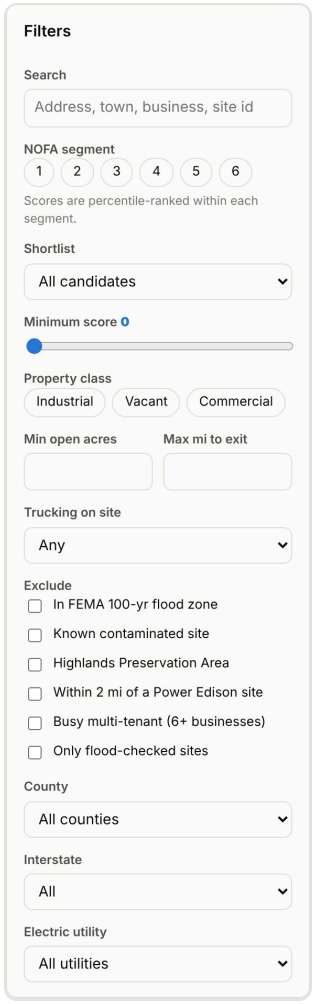

Six headline numbers for the **sites that currently match the filters**. With no filters set, they describe all 30,584 candidates.

Card	Big number	Small line underneath	How to use it
Candidate sites	Number of sites that match the filters.	"of 30,584 screened": the total in the database.	Watch it shrink as you narrow the search. If it hits 0, a filter is too strict.
Top score	Highest score among the filtered sites (max ≈ 110).	Average score of the filtered sites.	Compare segments: pick one segment at a time and note its top and average.
Trucking on site	Sites with a trucking, freight, warehouse, logistics, distribution, cold-storage, moving, courier or wholesale business on the parcel.	That count as a % of the filtered sites.	A fleet that already operates on the parcel is the most likely charging customer and host.
Within 0.5 mi of exit	Sites no more than 0.5 mi (straight line) from an eligible interchange. These get the full 20 exit points.	Median open land (acres) of the filtered sites.	Tells you how many sites have the best interstate access, and how much space a typical one has.
Near a Power Edison site	Sites within 2 mi of Kearny Point, Irvington, Edison or Paterson.	"≤ 2 mi — may compete for funding".	NJDEP may fund only one of two nearby strong proposals. Treat these as competing with our own pipeline.
Flagged	Flood-zone sites + known-contaminated sites (a site that is both is counted twice).	The two counts shown separately.	Both were checked only for the top 150 sites per segment. See §15.

6 · Filters

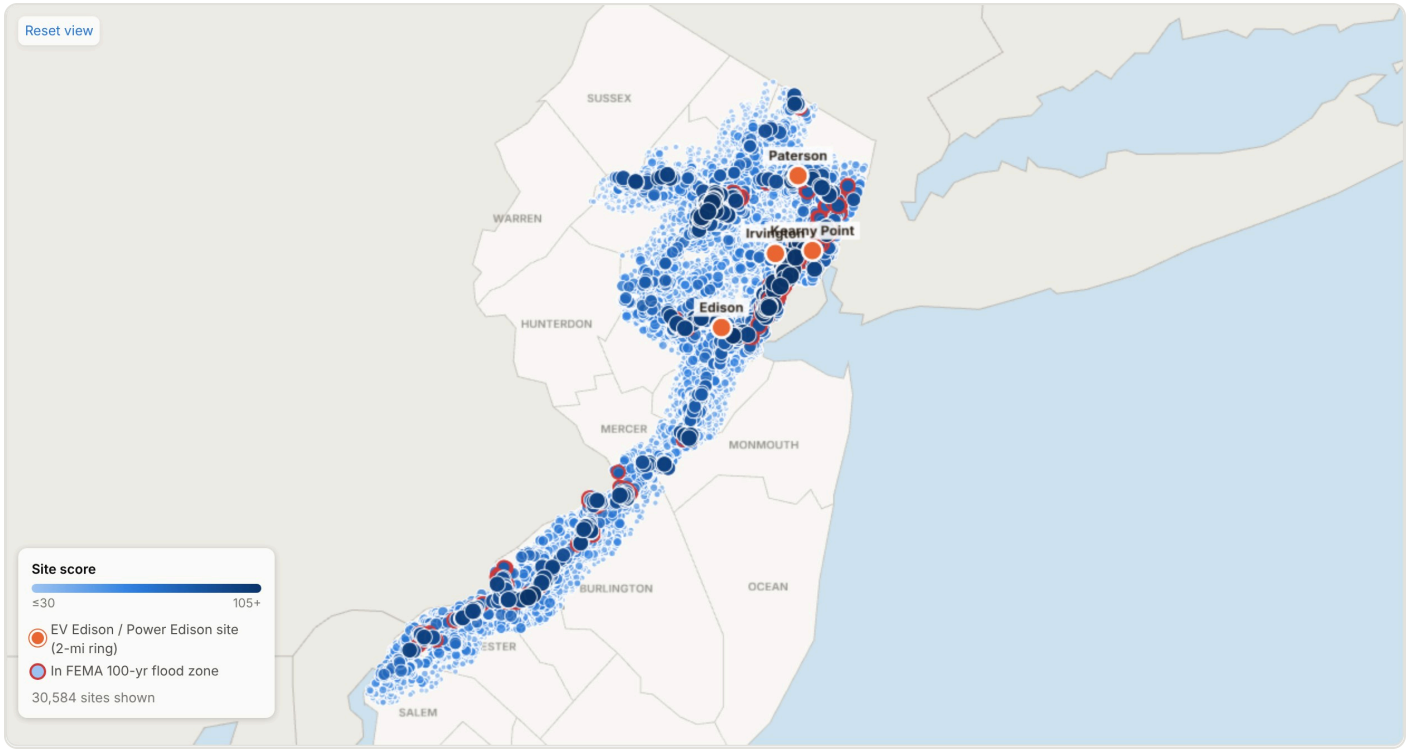

The left panel. All filters combine with **AND**: a site must pass every filter you set. Within the segment and property-class chips, the choices combine with **OR** (for example, Segment 3 *or* 4). The **Clear (n)** link at the top right shows how many filters are active and resets them all.

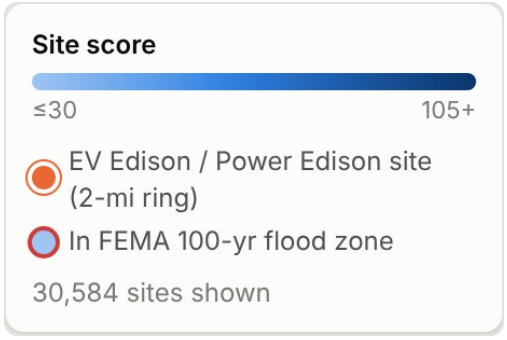

Field	What it does & how to use it
Search	Free text. Finds sites whose **address, municipality, site id, business names or owner mailing address** contain the text, e.g. *Bayway*, *Elizabeth*, *UPS* or *0421_405_1*. It isn't case-sensitive.
NOFA segment (1–6)	Click a number to show only that segment; click more to add segments. The selected chips turn blue. Hover a chip to see its counties: 1 Camden/Gloucester/Salem · 2 Burlington/Mercer · 3 Middlesex/Union · 4 Essex/Hudson · 5 Morris/Somerset · 6 Bergen/Passaic. Clicking a segment card (§9) does the same.
Shortlist	*All candidates*, or only the **top 10 / 25 / 50 / 100 / 150 of each segment** by rank. The rank is always the site's rank among all candidates in its segment, so combining "Top 25" with other filters gives you the subset of the top 25 that also pass them. "Top 150" is the flood-checked shortlist.
Minimum score	A slider from 0 to 110 in steps of 5; it applies when you release it. 0 means no limit. Try 90 to see only the strongest sites statewide.
Property class	Industrial (class 4B), Vacant (class 1), Commercial (class 4A). This uses the site's **best** class: a merged site with any 4B lot counts as Industrial. You can choose several.
Min open acres	Minimum estimated open land: the lot area minus building footprints. Type a number such as 3 and press Enter or Tab. Tractor-trailer hubs usually need 3 acres or more.
Max mi to exit	Maximum straight-line miles to the nearest eligible interchange (0–5). For example, 0.5 keeps only sites with full exit points.
Trucking on site	*Any* · *Freight / logistics business on parcel* · *No freight business*.
Exclude: FEMA 100-yr flood zone	Hides sites found inside a FEMA 100-year flood zone. Only the top 150 per segment were checked against the flood maps.
Exclude: Known contaminated site	Hides sites that have one or more NJDEP Known Contaminated Sites. Also checked only for the top 150 per segment.
Exclude: Highlands Preservation Area	Hides sites in the Highlands Preservation Area, where new development is restricted.
Exclude: Within 2 mi of a Power Edison site	Hides sites that could compete with our own pipeline sites for funding.
Exclude: Busy multi-tenant	Hides parcels with six or more businesses (busy retail or multi-tenant buildings).
Only flood-checked sites	Keeps only the sites whose flood status is known (the top 150 per segment).
County	One of the 13 counties.
Interstate	The site's nearest eligible highway, e.g. *I 95/NJ Turnpike*, *I 287*, *I 80*, *I 295*, *I 78*, *I 280*.
Electric utility	The utility territory: PSE&G, JCP&L, Atlantic City Electric, Rockland Electric, or a municipal utility. This is who you would file the interconnection request with.

7 · The map

Every filtered site is a dot. You can pan, zoom, hover and click. The map uses Google Maps when an API key is set up (§16); otherwise it uses an open OpenStreetMap / CARTO basemap.

All candidates. The dots trace New Jersey's interstate corridors; the orange markers are the Power Edison sites, each with a 2-mile ring.

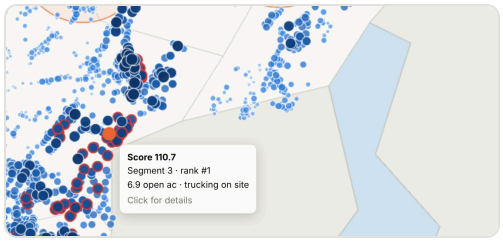

The legend, at the bottom left of the map.

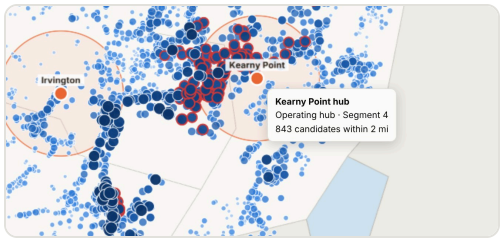

What you see	Meaning
Dot color	Site score on a single-blue scale: pale = 30 or below, dark navy = 105 or above. The best sites are the darkest.
Dot size	Also grows with the score (2.5 to 8 px), so the strong sites stand out when zoomed out. The best sites are drawn on top.
Red ring around a dot	The site is in a FEMA 100-year flood zone.
Orange marker + label	An EV Edison / Power Edison site: Kearny Point (operating), Irvington and Edison (letters of intent), Paterson (planned).
Light orange circle	The 2-mile radius around each Power Edison site.
Thick orange ring	The site you selected.
"N sites shown"	How many dots are on the map (the same as the Candidate sites KPI).

Interacting with the map

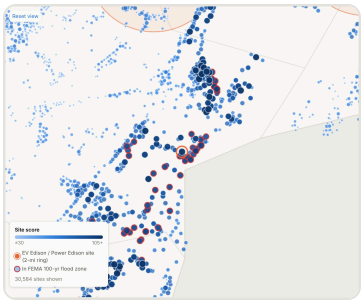

Action	Result
Hover a site	The dot turns orange and a tooltip shows **Score**, **Segment · rank #**, **open acres** (plus "trucking on site" if there is one), a red *In 100-yr flood zone* line if relevant, an orange *Within 2 mi of a Power Edison site* line if relevant, and "Click for details".
Hover a Power Edison marker	Shows the site name, its status (Operating hub / Letter of intent / Planned), its segment and how many candidates are within 2 mi.
Click a site	Opens the site detail panel (§8). The map zooms to the site at street level and marks it with the orange ring.
Scroll / drag	Zoom / pan. You don't need to hold Ctrl to zoom.
Map | Satellite (top left)	Switches between the road map and satellite imagery with labels. It is only available with Google Maps. Use Satellite to check that the "open land" really is open: no buildings, trees, wetlands or a full parking lot.
Reset view	Zooms back out to all of New Jersey.
Street View pegman / Fullscreen (Google)	Google's built-in controls: drag the pegman onto a street, or expand the map to full screen.
Message at the top right	"No Google Maps API key configured...": the map is using the open basemap. See §16 to add a key.

Hovering a site: the dot turns orange, and the tooltip shows its score, segment rank, open acres and trucking on site.

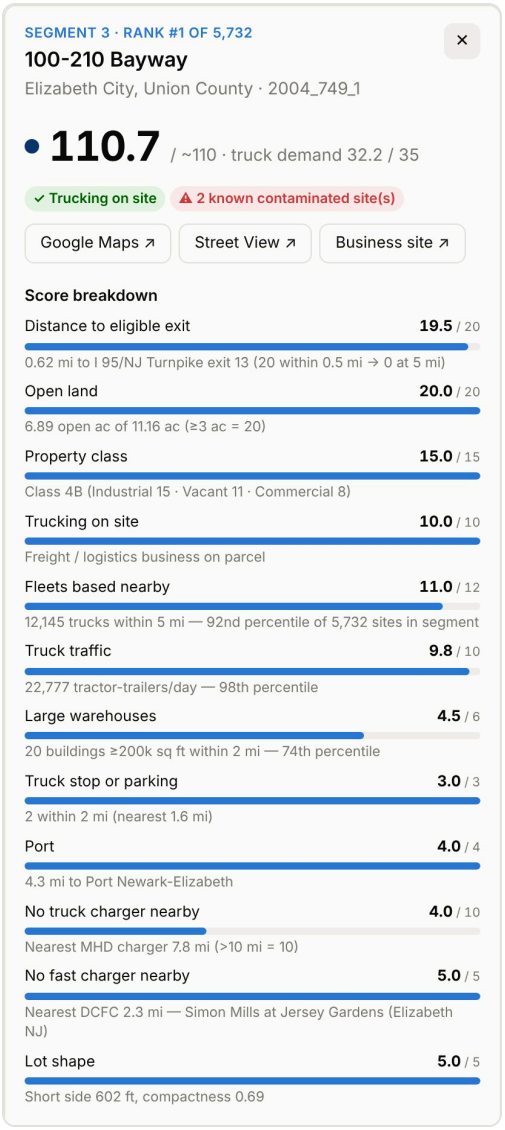

Hovering a Power Edison marker: name, status, segment, and the number of candidates in its 2-mile ring.

A clicked site gets the orange selection ring. Red-ringed dots are in a flood zone.

8 · Site detail panel

This panel opens on the right when you click a dot, a table row, or a segment card's "#1" link. Close it with ✕. It scrolls on its own, separately from the page.

Header

Field	Meaning
SEGMENT 3 · RANK #1 OF 5,732	The site's NOFA segment and its rank among all the candidates in that segment.
Address (title)	The site address. "(+N adjacent lots)" means several lots with the same owner were merged into one site.
Town, County · id	Municipality, county, and the site id (county-municipality code, then block and lot).
Big score	The total score (max ≈ 110). The dot next to it uses the map color. "truck demand X / 35" is the truck-demand subtotal.

Flags

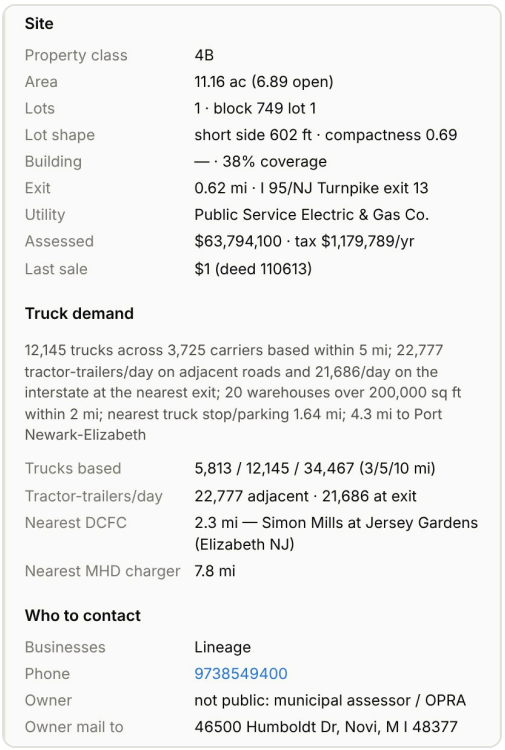

Flag	Meaning
✓ Trucking on site	A freight or logistics business is on the parcel.
⚠ Flood zone AE	Inside a FEMA 100-yr flood zone (the zone code is shown).
? Flood not checked	Outside the top 150 in its segment, so flood status is unknown.
⚠ N known contaminated site(s)	NJDEP Known Contaminated Sites on or at the parcel.
⚠ Highlands Preservation	In the Highlands Preservation Area.
! Busy multi-tenant	Six or more businesses on the parcel.
● 1.2 mi from Kearny Point hub	Within 2 mi of a Power Edison site, so it may compete for funding.

Buttons

Google Maps ↗ opens the location in Google Maps. **Street View ↗** opens the street-level view. **Business site ↗** opens the website of the business on the parcel (shown only when one is known).

Score breakdown

One row per scoring category: the points earned out of the maximum, a bar, and a grey line explaining **why** it got those points (for example, "12,145 trucks within 5 mi — 92nd percentile of 5,732 sites in segment"). Hover a row to see the explanation as a tooltip. A negative score (open land under 0.6 ac, or a lot narrower than 120 ft) shows as a red bar. Any penalties that apply are listed below under **Penalties applied**. All the rules are in §13.

Site

Property class	4B
Area	11.16 ac (6.89 open)
Lots	1 · block 749 lot 1
Lot shape	short side 602 ft · compactness 0.69
Building	— · 38% coverage
Exit	0.62 mi · I 95/NJ Turnpike exit 13
Utility	Public Service Electric & Gas Co.
Assessed	$63,794,100 · tax $1,179,789/yr
Last sale	$1 (deed 110613)

Truck demand

12,145 trucks across 3,725 carriers based within 5 mi; 22,777 tractor-trailers/day on adjacent roads and 21,686/day on the interstate at the nearest exit; 20 warehouses over 200,000 sq ft within 2 mi; nearest truck stop/parking 1.64 mi; 4.3 mi to Port Newark-Elizabeth

Trucks based	5,813 / 12,145 / 34,467 (3/5/10 mi)
Tractor-trailers/day	22,777 adjacent · 21,686 at exit
Nearest DCFC	2.3 mi — Simon Mills at Jersey Gardens (Elizabeth NJ)
Nearest MHD charger	7.8 mi

Who to contact

Businesses	Lineage
Phone	9738549400
Owner	not public: municipal assessor / OPRA
Owner mail to	46500 Humboldt Dr, Novi, M I 48377

Site

Row	Meaning
Property class	The tax class codes of the site's lots: 1 = vacant, 4A = commercial, 4B = industrial. "1/4B" means a merged site has both.
Area	Total acres, with the estimated open acres in brackets.
Lots	Number of lots, then block and lot (long lists are cut short).
Lot shape	Short side in feet, and compactness from 0 to 1 (1 = a square-like shape). Tractor-trailers need a short side of about 180 ft or more.
Building	Assessor building description and year built, with the share of the lot covered by buildings.
Exit	Miles to the nearest eligible interchange, the highway, and the exit number.
Utility	The electric utility territory.
Assessed	Land + improvement assessed value, and the annual property tax.
Last sale	The last sale price and the deed date (YYMMDD). A $1 sale is usually a transfer between related parties.

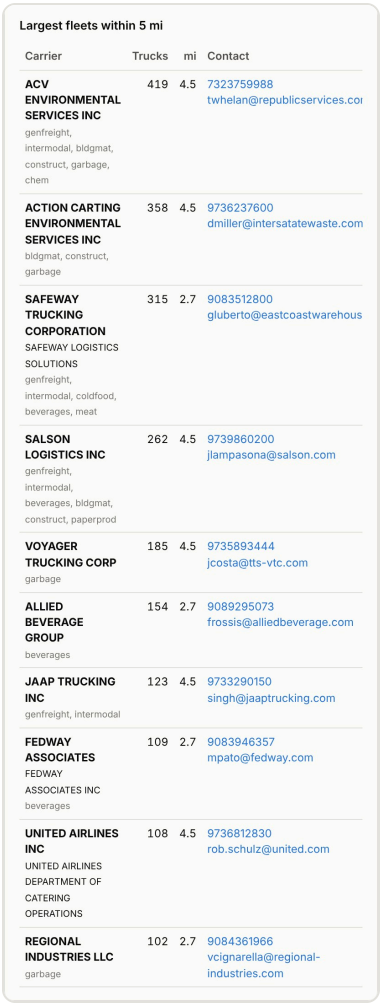

Truck demand

Row	Meaning
Summary sentence	A plain-English summary of fleets, truck traffic, warehouses, truck stops and the nearest port.
Trucks based	FMCSA-registered trucks based within 3, 5 and 10 mi.
Tractor-trailers/day	Tractor-trailer traffic per day on roads within 0.25 mi ("adjacent") and on the interstate at the nearest exit (FHWA 2023).

Nearest DCFC	Distance and name of the nearest DC fast charger of any kind.
Nearest MHD charger	Distance to the nearest charger that can serve medium or heavy-duty trucks.

Who to contact

Row	Meaning
Businesses / Phone	Up to 3 business names on the parcel, and a click-to-call phone number.
Owner	Owner names are not public in NJ (Daniel's Law). Get them from the municipal tax assessor, an OPRA request, or a data vendor.
Owner mail to	The owner's mailing address, which you can use for letters. "(likely owner-occupied)" means it matches the site.

Largest fleets within 5 mi

The 10 largest trucking companies registered within 5 miles. This list is available for the **top 100 sites in each segment**. These carriers are potential anchor customers for a charging hub.

Column	Meaning
Carrier	Legal name, DBA (trade name, if any) and cargo types (e.g. genfreight, intermodal, refrigerated, garbage).
Trucks	Power units registered with FMCSA.
mi	Approximate miles from the site. This is measured from the center of the carrier's ZIP code, not its street address.
Contact	Phone (click to call) and email (click to write), from the FMCSA census.

> Counts go by **registered address**. A national carrier's local terminal may not appear, and owner-operators are included. Check before you reach out.

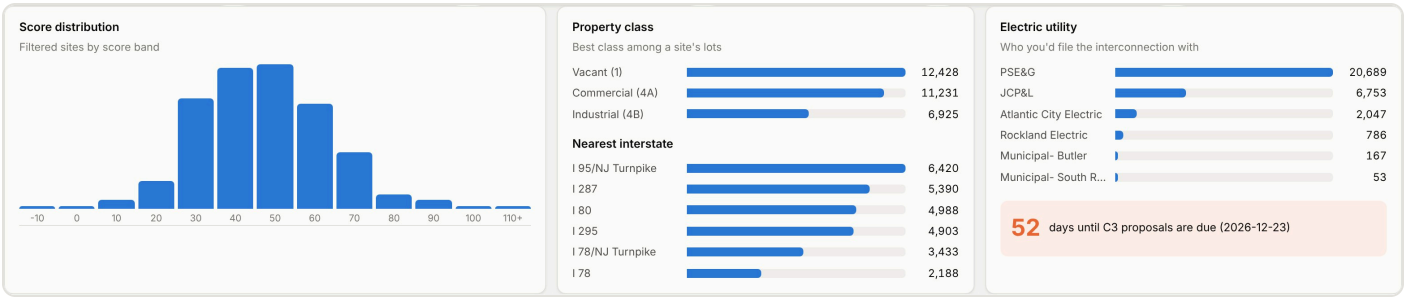

9 · Segment cards

Six cards under the map, one for each NOFA segment. The numbers follow the current filters.

Element	Meaning / action
Segment N	The segment number. **Click the card** to add or remove that segment from the filter; selected cards get a blue outline.
● Kearny Point hub; Irvington	Power Edison sites in that segment: Edison (3), Kearny Point and Irvington (4), Paterson (6).
Counties	The counties in the segment.
sites · top · avg	The number of filtered sites in the segment, the highest score, and the average score. When none match, the card is dimmed and says "No sites match the current filters".
#1 address →	The best filtered site in the segment. Click it to open its detail panel.

10 · Charts

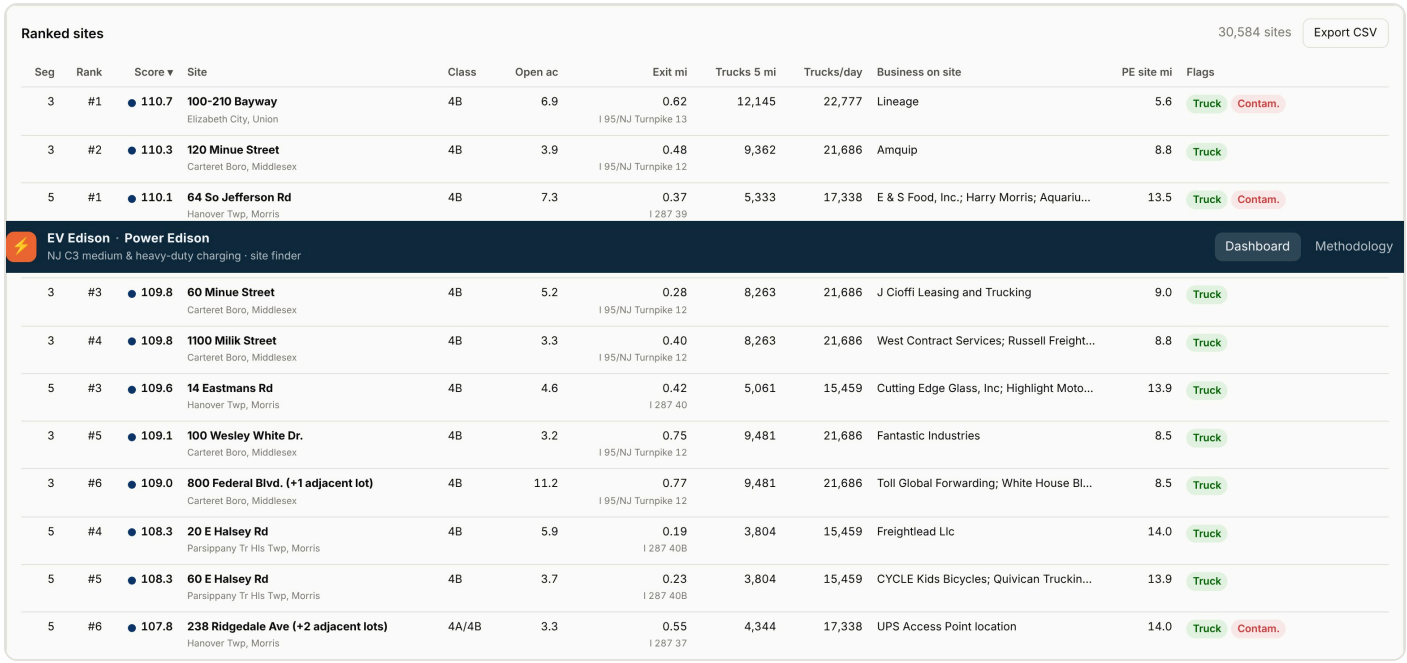

Hover any bar to see its exact count.

Chart	What it shows	How to read / use it
Score distribution	The number of filtered sites in each 10-point score band (from −10 to 110+).	Shows whether a filter leaves many strong sites (bars on the right) or only a few. Most candidates score 30–70.
Property class	Filtered sites by their best class: Vacant (1), Commercial (4A), Industrial (4B).	Industrial sites score highest (15 points) and usually have the most trucks on site.
Nearest interstate	The six highways with the most filtered sites.	Shows which corridor your shortlist is concentrated on.
Electric utility	The six utilities with the most filtered sites (PSE&G and JCP&L are abbreviated).	Shows which utilities you would need to work with on interconnection and make-ready.
Deadline box	"N days until C3 proposals are due (2026-12-23)", counted from today.	A countdown for planning.

11 · Ranked sites table & CSV export

At the bottom of the page: every filtered site, 25 per page by default, sorted by score from highest to lowest.

Columns

Column	Sortable	Meaning
Seg	—	NOFA segment (1–6).
Rank	✓	Rank within the segment. Sorting by rank lists every segment's #1 first, then every #2, and so on.
Score	✓	Total score, with its map color dot. This is the default sort (highest first).
Site	—	Address in bold, with municipality and county underneath.
Class	—	Property class code(s): 1, 4A, 4B or combinations.
Open ac	✓	Estimated open acres.
Exit mi	✓	Miles to the nearest eligible exit, with the highway and exit number underneath.
Trucks 5 mi	✓	Trucks registered within 5 miles.
Trucks/day	✓	Tractor-trailers per day: the higher of the adjacent-road count and the count at the exit.
Business on site	—	Business names on the parcel. Hover to see the full text.
PE site mi	✓	Miles to the nearest Power Edison site. Shown in orange when it is 2 mi or less.
Flags	—	Truck trucking on site · Flood · Contam. · Highlands · PE ≤2 mi.

Controls

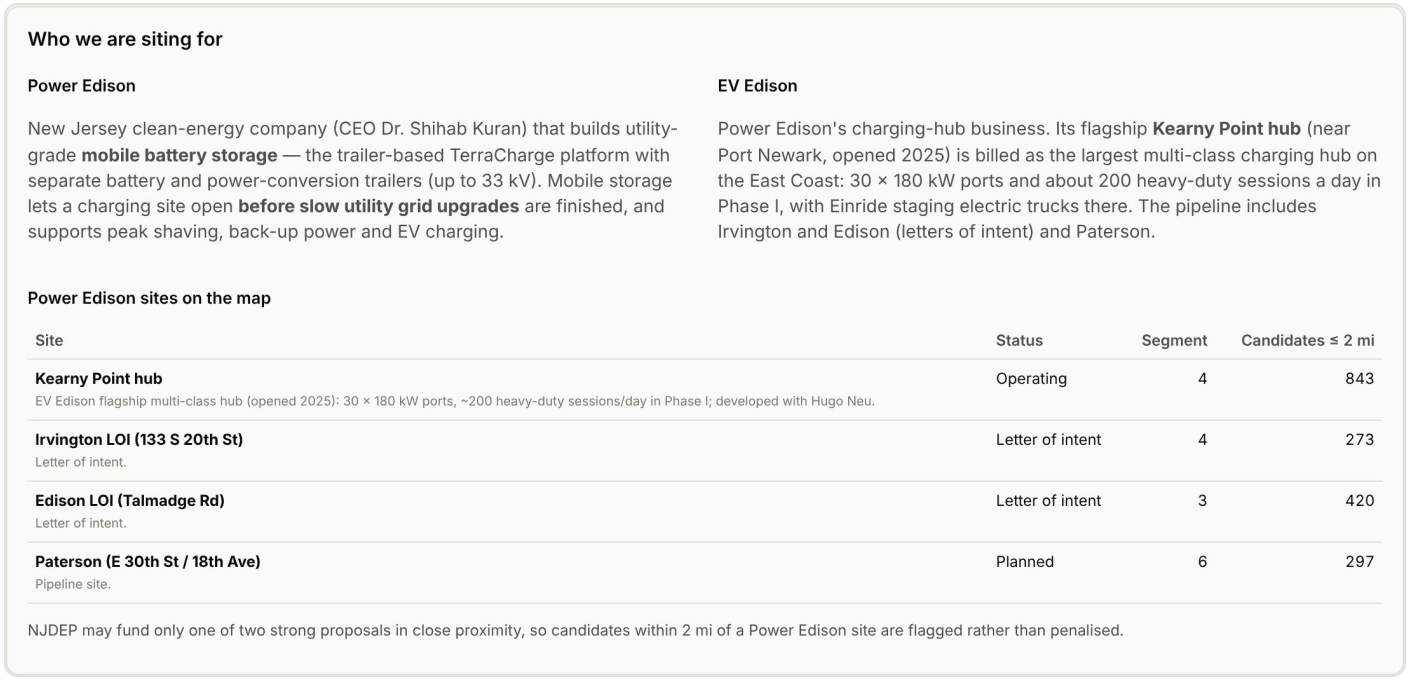

- **Sort:** click a column header marked ✓ above. Click it again to reverse the order (▾ = descending, ▴ = ascending). Distance columns sort nearest first.
- **Open a site:** click a row, or move to it with Tab and press Enter. The page scrolls up to the map and opens the detail panel. The selected row is highlighted in blue.
- **Pages:** use ‹ Prev / Next ›. "Page X of Y" shows where you are, and the selector at the end sets 25, 50 or 100 rows per page.
- **Export CSV:** downloads all the filtered sites, not just the current page, ordered by segment and rank. It opens in Excel.

CSV columns

segment, rank, score, site_id, address, municipality, county, prop_class, acres, open_acres, miles_to_exit, highway, exit, trucks_5mi, truck_traffic, warehouses_2mi, businesses, freight_use, utility, flood_zone (or "not checked"), contaminated (or "not checked"), highlands, nearest_pe_site, miles_to_pe_site, owner_mail_address, owner_mail_city, owner_mail_zip, business_phone, lat, lon.

12 · Methodology page

Open it from **Methodology** in the header. It has three sections.

Who we are siting for

Power Edison

New Jersey clean-energy company (CEO Dr. Shihab Kuran) that builds utility-grade **mobile battery storage** — the trailer-based TerraCharge platform with separate battery and power-conversion trailers (up to 33 kV). Mobile storage lets a charging site open **before slow utility grid upgrades** are finished, and supports peak shaving, back-up power and EV charging.

EV Edison

Power Edison's charging-hub business. Its flagship **Kearny Point hub** (near Port Newark, opened 2025) is billed as the largest multi-class charging hub on the East Coast: 30 × 180 kW ports and about 200 heavy-duty sessions a day in Phase I, with Einride staging electric trucks there. The pipeline includes Irvington and Edison (letters of intent) and Paterson.

Power Edison sites on the map

Site	Status	Segment	Candidates ≤ 2 mi
Kearny Point hub EV Edison flagship multi-class hub (opened 2025): 30 × 180 kW ports, ~200 heavy-duty sessions/day in Phase I; developed with Hugo Neu.	Operating	4	843
Irvington LOI (133 S 20th St) Letter of intent.	Letter of intent	4	273
Edison LOI (Talmadge Rd) Letter of intent.	Letter of intent	3	420
Paterson (E 30th St / 18th Ave) Pipeline site.	Planned	6	297

NJDEP may fund only one of two strong proposals in close proximity, so candidates within 2 mi of a Power Edison site are flagged rather than penalised.

Section	Contents
Who we are siting for	A short profile of Power Edison and EV Edison, and a table of the Power Edison sites: name, notes, status, segment, and how many candidates are within 2 mi (Kearny Point 843, Irvington 273, Edison 420, Paterson 297).
Scoring algorithm	The full points table (also in §13 of this guide), plus the rules the workbook applies without stating them.
Data sources & method notes	Every note from the workbook's "Method and sources" sheet: the program, segments, eligibility screen, the data source for each measure, and the build date.

13 · How the score is calculated

Each site's score is the sum of the rows below (maximum about 110). The app recalculates it from the raw data. Your workbook's scores are reproduced to within ±0.05, and every rank in every segment is identical.

Category	Max	How points are earned
Distance to eligible exit	20	20 within 0.5 mi, then falling in a straight line to 0 at 5 mi. Points = 20 × (5 − miles) ÷ 4.5. The NOFA scores closer sites higher.
Open land	20	Lot area minus building footprints: ≥3 ac → 20 · 1.5–3 ac → 16 · 1–1.5 ac → 10 · 0.6–1 ac → 3 · under 0.6 ac → **−15**.
Property class	15	Best class among a merged site's lots: Industrial 4B → 15 · Vacant 1 → 11 · Commercial 4A → 8.
Trucking on site	10	Trucking, freight, warehouse, logistics, distribution, cold storage, moving, courier or wholesale business on the parcel → 10 · other industrial (manufacturing, construction, equipment) → 4 · neither → 0.
Truck demand	35	The total of the five parts below.
· **Fleets based nearby**	12	Trucks registered within 5 mi (FMCSA), as a **percentile within the segment** × 12.
· **Truck traffic**	10	The higher of tractor-trailers/day on roads within 0.25 mi and on the interstate at the nearest exit (FHWA 2023), as a percentile × 10.
· **Large warehouses**	6	Buildings of 200,000 sq ft or more within 2 mi, as a percentile × 6.
· **Truck stop or parking**	3	3 if any truck stop or truck parking is within 2 mi.
· **Port**	4	4 if a port is within 5 mi · 2 if within 10 mi.
No truck-capable charger nearby	10	10 if the nearest medium/heavy-duty charger is more than 10 mi away, otherwise 4.
No fast charger nearby	5	5 if the nearest DC fast charger of any kind is more than 2 mi away.
Lot shape	5	5 if compactness ≥ 0.5 and short side ≥ 180 ft · 0 if the short side is 120–180 ft (or the lot isn't compact) · **−10** if under 120 ft (too narrow for tractor-trailers).

Penalties

Condition	Points
More than 0.5 mi from a road carrying 500+ tractor-trailers/day	−10
In the Highlands Preservation Area	−15
Six or more businesses on the parcel (busy retail or multi-tenant)	−5

In a FEMA 100-year flood zone (checked for the top 150 in each segment)	−10

What "percentile within the segment" means

The NOFA scores each proposal against the others in its own segment, so three of the demand measures are ranked within the segment. A site at its segment's 90th percentile for fleets gets 0.9 × 12 = **10.8** points. Sites with equal values share the same (average) percentile. As a result, a site in a quieter segment can earn full demand points with fewer trucks than a site in Essex/Hudson.

Three rules the workbook applies without stating them

1. **Flood status not checked:** only the top 150 sites per segment were checked against FEMA maps. Every unchecked site also carries the −10 flood penalty, so it stays ranked below the verified shortlist. In the detail panel this shows as `? Flood not checked`, with "penalised until verified" in the breakdown.
2. **Busy multi-tenant:** the workbook lists at most 3 business names, not how many businesses there are. The app works the flag out from the workbook's own scores; 3,560 sites have it.
3. **Ties:** ranks use the score rounded to one decimal; when two sites tie, the one closer to the exit ranks first.

> **Worked example: 100-210 Bayway, Elizabeth (Segment 3, #1, 110.7).** Exit 19.5 (0.62 mi) + open land 20 (6.89 ac) + class 15 (4B) + trucking 10 (Lineage cold storage) + fleets 11.0 (92nd percentile) + traffic 9.8 (98th) + warehouses 4.5 (74th) + truck stop 3 + port 4 (4.3 mi to Port Newark-Elizabeth) + truck charger 4 (an MHD charger is 7.8 mi away) + fast charger 5 (2.3 mi) + lot shape 5 = **110.7**, with no penalties. Small differences in the last decimal are rounding.

14 · Step-by-step workflows

A. Build a shortlist for one segment

1. Click the segment's chip (or its card), e.g. **3**.
2. Set **Shortlist → Top 50 per segment**.
3. Tick **Exclude: FEMA flood zone**, **Known contaminated site** and **Within 2 mi of a Power Edison site**.
4. Set **Min open acres** to 3 and **Max mi to exit** to 1.
5. Check the KPI cards and the score distribution, then work down the table from the top.
6. Click **Export CSV** to save the list for the team.

B. Review one site properly

1. Click the site on the map or in the table.
2. Read the **Score breakdown**. Low rows show where the site is weak, and any penalties are listed.
3. Switch the map to **Satellite** (with a Google key) and zoom in. Confirm the open land is really open and that a tractor-trailer can get in and turn around.
4. Open **Street View ↗** to check the entrance, the road and any height or weight limits.
5. Check the flags (flood / contaminated / Highlands / PE proximity) and the **Exit** row. Over about 4 mi, check the real driving distance.

C. Find sites that host a fleet already

1. Set **Trucking on site → Freight / logistics business on parcel** and choose **Industrial**.
2. Sort the table by **Trucks/day** or **Trucks 5 mi**.
3. Open a site and call the business using the **Phone** link in "Who to contact".

D. Plan outreach to owners and fleets

1. Filter to your shortlist and click **Export CSV**. Use the owner mailing address columns for letters.
2. For each top site, open the detail panel. Use **Largest fleets within 5 mi** to contact anchor customers (phone and email).
3. Get owner names from the municipal tax assessor or an OPRA request (they aren't published).

E. Check for conflicts with our own sites

1. Leave the exclusion unticked, and sort the table by **PE site mi** (nearest first).
2. Anything in orange (2 mi or less) could compete with Kearny Point, Irvington, Edison or Paterson for funding.
3. Then tick **Exclude: Within 2 mi of a Power Edison site** to see the shortlist without those sites.

F. Find a specific property

Type part of the address, the town, a business name or the site id into **Search**, then click the result in the table.

G. Compare segments

With no segment selected, read the segment cards: sites, top score and average for each segment. Then click one card at a time and compare the KPIs and charts.

15 · Data notes & limitations

Topic	What to keep in mind
Distance to exit	Straight-line miles to the nearest eligible interchange (OpenStreetMap). The NOFA doesn't say whether it means straight-line or driving distance. Check driving distance for sites more than about 4 mi away.
Open land	Parcel area minus building footprints. It still includes parking in use, wetlands and slopes, so confirm on satellite imagery.
Flood & contamination	Checked only for the top 150 sites per segment. "Not checked" doesn't mean the site is clean.
Businesses on site	Overture Maps places inside the parcel; up to 3 names are listed.
Owner names	Blank in every public NJ parcel service (Daniel's Law). Only the mailing address is available.
Existing chargers	AFDC station locator (DC fast, open and planned). Only 2 NJ stations are listed as medium/heavy-duty capable, so most sites get 10 points for "no truck charger nearby".
Fleets	FMCSA census by registered address, placed at the ZIP code's center. National carriers' local terminals may be missing, and owner-operators are included.
Truck roads	NJDOT doesn't publish its large-truck network, so roads with 500+ tractor-trailers/day (HPMS 2023) are used instead.
Zoning	Available only for Somerset County.
Ports	Straight-line distance to approximate terminal points: Port Newark-Elizabeth, Port Jersey/Bayonne, Philadelphia Packer Ave, South Jersey Port (Camden), Paulsboro and Wilmington.

> The ranking is a **starting point for desktop review** (truck access, lot shape, real open land on imagery) before outreach. It is not a final siting decision.

16 · Administration

Task	How
Load a new version of the workbook	Send the .xlsx to `POST /api/admin/import` (form field `file`). This replaces all the data and recalculates every score, which takes about 15–20 seconds. The response reports whether the scores still match the workbook.
Recalculate scores	`POST /api/admin/rescore`. The weights are in `ScoringRules.cs`.
Turn on Google Maps	Create a **Maps JavaScript API** key in Google Cloud. Restrict it to your site's address and to the Maps JavaScript API. Then run `dotnet user-secrets set "GoogleMaps:ApiKey" "<key>"` in the API project and restart. Full steps are in the README.

Change database	Edit `ConnectionStrings:DefaultConnection` in `appsettings.json`. The default is SQL Server LocalDB.
Security	The `/api/admin` endpoints have no login yet. Add authentication before you share the app beyond your own computer.

17 · Glossary

Term	Meaning
NOFA	Notice of Funding Availability. Here, NJDEP's C3 medium & heavy-duty EV charging program.
Segment	One of six county groups in NOFA Table 2. Proposals compete only within their own segment.
MHD	Medium and heavy-duty vehicles (box trucks to tractor-trailers).
DCFC	DC fast charger.
AADT	Annual average daily traffic. "Tractor-trailers/day" is the combination-truck AADT.
Property class 1 / 4A / 4B	NJ tax classes: vacant land / commercial / industrial.
Block / Lot / Qual	NJ tax-map parcel identifiers. The site id combines the municipality code, block and lot.
Merged site	Adjacent lots with the same owner mailing address, treated as one site ("+N adjacent lots").
Open acres	Lot area minus building footprints.
Compactness	How square-like a lot is (0–1). Long, thin lots score low.
Percentile	The share of sites in the same segment with a lower or equal value (0–100%).
LOI	Letter of intent: a pipeline site (Irvington, Edison).
Highlands Preservation Area	A protected region in northwest NJ where new development is restricted.
FEMA 100-yr flood zone	An area with a 1% annual chance of flooding (zone codes A, AE, VE).
OPRA	NJ Open Public Records Act request. One way to get owner names.
